Abstract of corresponding document: **GB1503103**

1503103 Agitating liquids MITSUI MIN- ING & SMELTING CO Ltd 12 March 1976 [12 March 1975] 9908/76 Heading B1C [Also in Division C3]

Foreign material is stripped from plastics material by contacting the composite material with an aqueous liquid under turbulent flow conditions. Figs. 3a and 3b illustrate a side view and plan view, respectively, of an im- peller 10 used for producing the turbulent flow conditions. The impeller comprises a rotatable support 11 having central opening 12 to receive drive shaft 17, and around the opening 12 concentric vane 13, around which six curved vanes 14 are disposed. Vane terminals 15 are provided to increase agitation. Turbulent flow is achieved by clockwise rotation of the vanes.

(54) METHOD OF STRIPPING FOREIGN MATERIAL FROM PLASTICS MATERIAL

(71) We, MITSUI MINING & SMELTING Co. LTD., a Japanese Company of No. 1-1, Nihonbashi Muromachi 2-chome, Chuo-Ku,

Tokyo, Japan, do hereby declare the invention, for which we pray that a patent may be granted to us, the method by which it is to be performed, to be particularly described in and by the following statement. This invention relates to a method of stripping foreign material from the surfaces of plastics material
